**EVOLVING SOLUTIONS & INDUSTRY
PROVEN DRILLING FLUID PRODUCTS**

WE INNOVATE OTHERS DUPLICATE

THE MANUFACTURER YOU NEVER HEARD OF

For almost 40 years, our team has been *inventing, developing & supplying* the most recognized drilling fluid additives in the industry.

Supplying most of the major third party suppliers of specialty drilling fluid additives with the most recognized names in the industry, we are *THE PROVEN LEADER* and *YOUR BEST CHOICE* for any drilling fluid products or solutions your company may require.

enventives

MAKING SPECIALTY PRODUCTS EVERYDAY PRODUCTS

With the changing environment in the oil industry, we are seeing a change in the way many companies are looking at the value and economics of specialty chemicals and technologies. As the market changes and learns how to operate in a challenging environment, we feel its best for us to work as close to the end user as possible.

In bringing our products and our solutions to companies like yours directly, we can deliver you the best product at the best price for all of your needs encountered during drilling.

LOSS CIRCULATION MATERIALS

*Premium & Low Cost
Formulations
Field Proven for 30+ Years*

Based on our originally patented novel technology to micronize & surface modify any type of cellulose, Ven-Fyber™ products are in use all over the globe due to their superior and proven performance along with our unique approach to the technology.

Our laboratories are where the initial concepts and applications techniques for seepage-loss additives were developed. Our technology is utilized in seepage loss, severe loss circulation, squeeze products as well as pill and sweep applications.

Strategically located in the Permian Basin, our Seagraves TX facility can provide FOB pricing on the Premium & Low Cost Products you need.

Where & When You Need Them

HIGH FLUID LOSS / HIGH SOLIDS SLURRY LOST CIRCULATION PLUGS

Enventives is the unquestioned industry leader in the developing, manufacturing and servicing the best selling and best performing squeeze products available today. We know more about solving your problems in this area than anybody in the market - including your current supplier.

ORGANOLIGNITES & MODIFIED LIGNITES

As a pioneer in the field of Organolignites, we remain one of the few wholesale manufacturers capable of mass production of premium quality organophilic and other lignite-based derivatives products.

Ven-Chem™ 215 | Ven-Chem™ 208 | Ven-Chem™ 222

Fluid Loss Additives for Oil & Synthetic Based Fluids

Used to control Fluid Loss Properties of oil base fluids at temperatures up to 500° and with special application techniques, have been effective at temperatures exceeding 500°.

Ven-Rez II™

Chrome Free Lignite Derivative designed to produced improved filtration control and stabilize rheological properties in Hi Temperature Water Based Muds

Ven-Alk™

Highly Efficient, Multi-Purpose Mud Conditioner for Water Based Muds

Ven-REZ I™

A Chrome Free Resinated lignite derivative engineered with a potassium ion to provide improved filtration control and stabilize rheological properties in High Temperature Water Based Muds

Ven-K™

Highly Efficient, Multi-Purpose Mud Conditioner for Water Based Muds

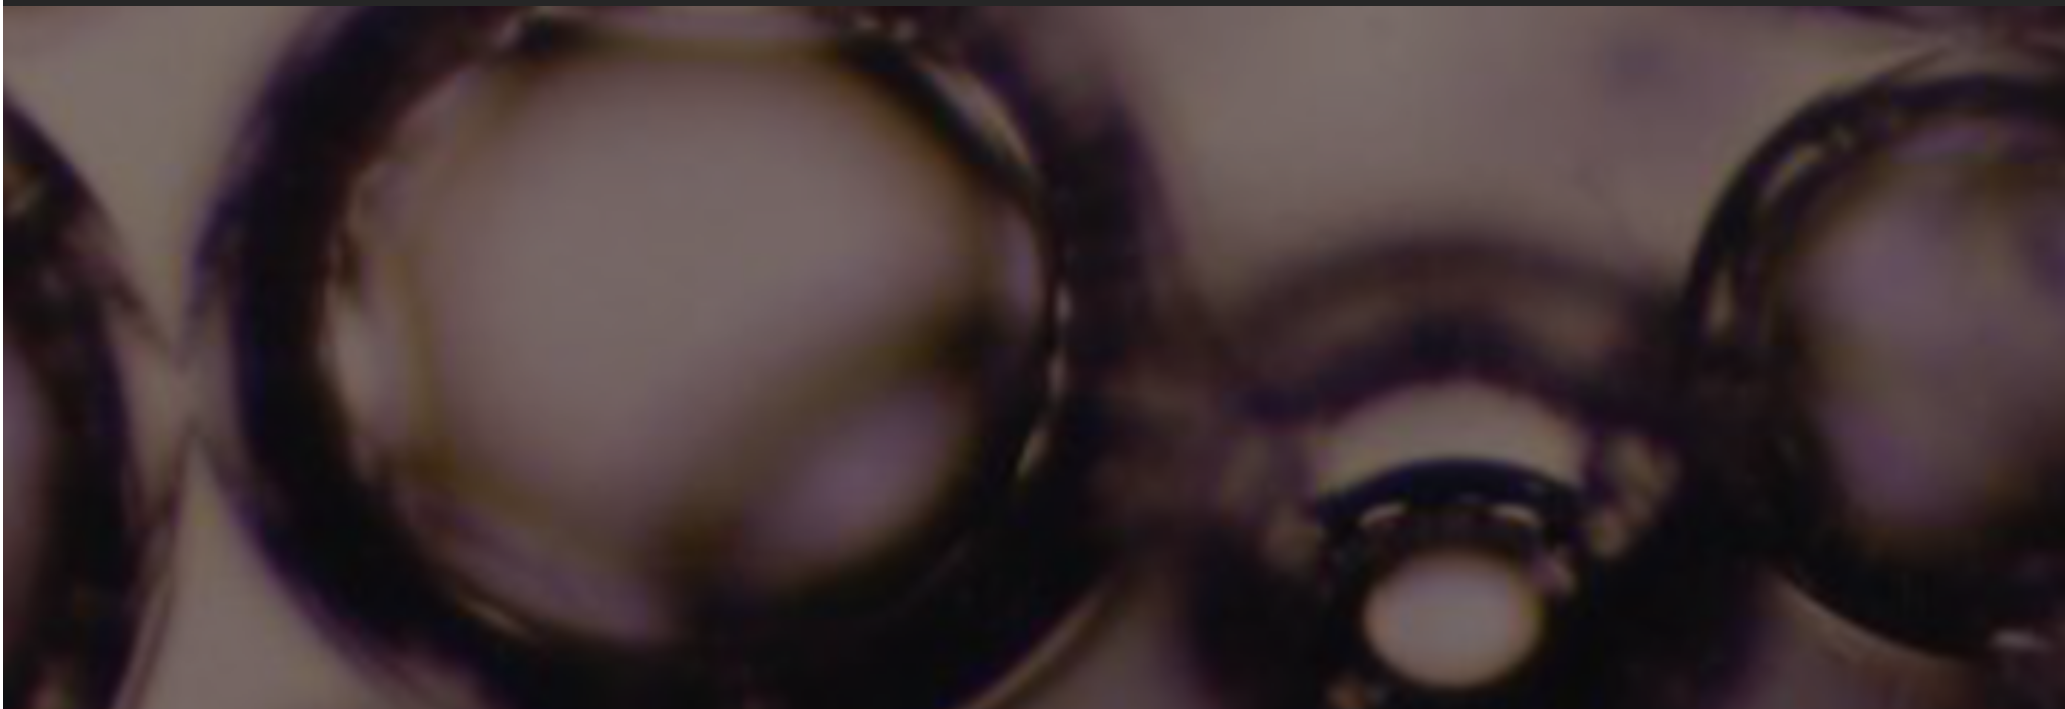

AphronICS™

Our patented innovative drilling fluid technology incorporates uniquely structured micro-bubbles and serves as a first line of defense to prevent leak-off during the initial invasion period after a drill bit cuts into rock.

Our AphronICS™ technology has highly successful field proven capability in drilling depleted reservoirs and other low pressure or permeable formations by solving many issues such as fluid loss control, formation damage, differential sticking and stabilization of multi-pressure sequences with one fluid.

The AphronICS™ drilling fluid reduces whole mud loss and minimizes collateral damage to high-permeability porous reservoirs.

This versatile drilling fluid system offers unique mechanical and economic solutions which can produce increased profit for your company and reduce your customers overall well construction cost.

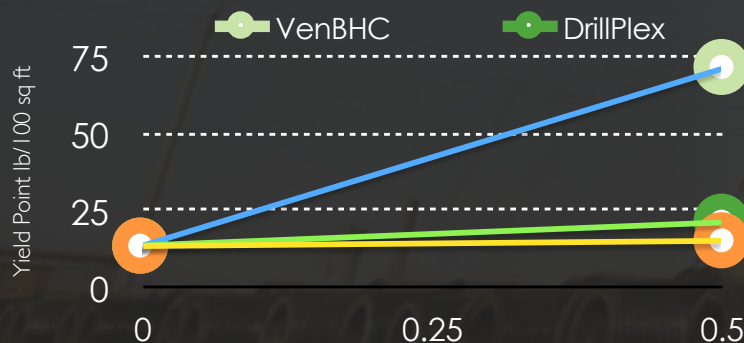

Ven-BHC™

A Low-Cost & Superior Replacement for MMO/MMH Drilling Systems

Our Ven-BHC™ is a unique inorganic, synthetic gel-strength modifier for water-based drilling, milling, HDD and completion fluids.

Ven-BHC™ is a proprietary “poly hydroxy silicate” technology which through rheology modification, provides superior hole cleaning for the mining of casing, drilling highly deviated or horizontal sections as well as straight hole drilling applications.

Yield Point Behavior of Ven-BHC™ vs DRILPLEX™ & MMO
at 0.5 lb/bbl in 10 lb/bbl Treated (Peptized) Bentonite

PRIVATE LABEL & CUSTOM BLENDING

You know what you want? We are here to lower your costs on your custom blended products. We've been doing that for 30 years.

GIVE US A SHOT.

Combined with our top of the line *Specialty Products & Service*, you can increase your margins on your staple products and not miss out on the Premium Products the 3rd Party Specialty Companies are saying you don't have.

MAKING THE BEST PRODUCTS IN THE MARKET TODAY

“To compete with the best products in the market today, you have to be buying your products from the ONLY Company that is making those products. “

That company is

enventives

THE FUTURE

We can do for you what we have been doing for 30+ years - building the products of the FUTURE. Make sure the next product of the FUTURE is *your* product and not your competitors.

We build truly unique products, that solve your unique problems.
We don't just give you a "special" blend that's just a little different.
We provide you a truly unique product for your unique problems.

ASK YOUR CURRENT SUPPLIER IF THEY DO THAT?
